

3 of 16 launch checks are failing.

Measured 70 checks · 58 need a human · 13 we couldn't measure · 11 need your answer

The 16-point launch gate

1	5-second test	Couldn't measure
2	Mobile Core Web Vitals	Couldn't measure
3	Zero layout shift, throttled	Needs a human
	Measured part passed, plus a manual step below.	
4	Every form works end to end	Needs a human
5	HTTPS, redirect, and no mixed content	Passed
6	Privacy and Impressum linked everywhere	Needs a human
7	Nothing tracks before consent	Couldn't measure
8	Fonts self-hosted	Couldn't measure
9	Titles, descriptions, source content, and sitemaps	Failing
10	Staging not indexable	Failing
11	404, errors, broken links, and placeholders	Failing
	Measured part passed, plus a manual step below.	
12	Keyboard pass	Couldn't measure
13	Cross-browser and social preview render	Couldn't measure
14	Copy pass	Needs a human
	Measured part passed, plus a manual step below.	
15	Domain renewal, backups, and monitoring	Needs a human
	Measured part passed, plus a manual step below.	
16	Selling rules, withdrawal, order button, and accessibility law	Needs a human
17	Analytics and conversion events firing (not gate-blocking)	Needs a human
	Measured part passed, plus a manual step below.	

Fix these first

Fix: Add icon, apple touch icon, manifest, 192 pixel icon, 192 icon api, and 512 icon no.

Fix: Publish a crawlable square favicon that is at least 96 pixels and divisible by 48.

Fix: Add complete OG image and twitter card tags with a 1200 by 630 image under 300 KB.

Fix: Add a footer with home, contact, legal, and navigation links to every captured page.

Fix: Add a clear next step action to every captured page.

Fix: Add a contact or help link that is reachable from every captured page.

Fix: Return a real 404 page with navigation, footer, and a home link.

Fix: Rewrite captured titles to 50-60 characters and descriptions to 120-160 unique characters.

Fix: Redirect every host and slash variant to one canonical production host in a most one hop.

Fix: Set each captured page canonical to its final URL and include it in the sitemap.

Fix: Publish a 200 XML Sitemap with canonical same-origin content URLs.

Fix: Add X-Robots tag noindex or a robots noindex meta tag to staging and preview URLs.

Fix: Add Organization's SCHEMA with name, logo, url, and sameAs.

Fix: Add WebSite schema on the homepage and BreadcrumbList schema on deep pages.

Fix: Add Google Search Console and Bing Webmaster verification tokens.

Fix: Fix missing labels, missing alt text, landmark structure, and H1 structure before launch.

Fix: Add nosniff, CSP frame-ancestors, and Referrer-Policy header.

Fix: Add terms of AGB before taking orders.

Fix: Add the missing standard pages and verify the 404 response.

Fix: Add footer legal links, contact details, social links, current year, and a mini-sitemap.

Fix: Shorten paragraphs, add scannable lists, and remove hollow buzzwords.

Fix: Add visible team identity, named people, and a real email on the site domain.

Fix: Add SPF, DKIM, and DMARC with at least p=none and rua on the sending domain.

Fix: Authenticate transactional email with a real provider on the sending domain.

The hand-check list (58)

No tool can honestly measure these from outside. This is the checklist we run by hand on every site we ship.

- ☐ **Real iOS + Android device test pre-launch** Standard
Manually confirm Real Apple mobile + Android device test pre-launch: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **No forced re-entry of data in a flow (2.2)** Standard
Manually confirm No forced re-entry of data in a flow (2.2): verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Drag interactions have single-pointer alternative (2.2)** Standard
Manually confirm Drag interactions have single-pointer alternative (2.2): verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Automated a11y in CI + manual SR smoke test** Standard
Manually confirm Automated a11y in CI + manual SR smoke test: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Server-side validation always** Blocker
Manually confirm Server-side validation always: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Submit pending state + clear success confirmation** Blocker
Manually confirm Submit pending state + clear success confirmation: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Rate-limit public POST endpoints** Blocker
Manually confirm Rate-limit public POST endpoints: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Designed empty states for lists/search** Standard
Manually confirm Designed empty states for lists/search: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Server Components default; use client only at leaves** Blocker
Manually confirm Server Components default; use client only at leaves: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Dynamic-import heavy below-fold components** Standard
Manually confirm Dynamic-import heavy below-fold components: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Partial Prerendering evaluated per route** Standard
Manually confirm Partial Prerendering evaluated per route: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Optimistic UI on mutations** Nice to have
Manually confirm Optimistic UI on mutations: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Lighthouse CI assertion on PR previews** Standard
Manually confirm Lighthouse CI assertion on PR previews: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Test on throttled mid-tier hardware pre-ship** Standard
Manually confirm Test on throttled mid-tier hardware pre-ship: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **First-hand perspective per page** Standard
Manually confirm First-hand perspective per page: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.

- ☐ **Original data/research/benchmarks** Nice to have
Manually confirm Original data/research/benchmarks: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Review GSC "Search Generative AI performance" report** Standard
Manually confirm Review GSC "Search Generative AI performance" report: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Quarterly ask-the-AIs audit (top 5 buyer questions)** Standard
Manually confirm Quarterly ask-the-AIs audit (top 5 buyer questions): verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **One canonical "everything about us" page** Nice to have
Manually confirm One canonical "everything about us" page: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Watch agentic commerce protocols (UCP/AP2)** Nice to have
Manually confirm Watch agentic commerce protocols (UCP/AP2): verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Lockfile committed; CI frozen; audit findings acted on** Blocker
Manually confirm Lockfile committed; CI frozen; audit findings acted on: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Every API route checks auth+ownership (RLS)** Blocker
Manually confirm Every API route checks auth+ownership (RLS): verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **DB backups ON, restore once-tested** Blocker
Manually confirm DB backups ON, restore once-tested: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **DPA signed with every processor; processors named in policy** Blocker
Manually confirm DPA signed with every processor; processors named in policy: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Only licensed media; receipts kept** Standard
Manually confirm Only licensed media; receipts kept: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Art. 30 records table** Nice to have
Manually confirm Art. 30 records table: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **"Start now = lose withdrawal" acknowledgment before delivery** Blocker
Manually confirm "Start now = lose withdrawal" acknowledgment before delivery: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **BFSG check per entity; exemption documented** Standard
Manually confirm BFSG check per entity; exemption documented: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Double opt-in DE/EU newsletters; neutral confirmation** Blocker
Manually confirm Double opt-in DE/EU newsletters; neutral confirmation: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Marketing emails: unsubscribe + Impressum; consent logged** Blocker
Manually confirm Marketing emails: unsubscribe + Impressum; consent logged: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.

- ☐ **No cold B2C email; [DE] B2B cold email effectively prohibited** Blocker
Manually confirm No cold B2C email; [DE] B2B cold email effectively prohibited: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Headline states outcome/offer, not slogan; benefit before feature** Blocker
Manually confirm Headline states outcome/offer, not slogan; benefit before feature: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **One documented voice; About + pricing sound the same** Blocker
Manually confirm One documented voice; About + pricing sound the same: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Conversion events defined AND verified firing** Blocker
Manually confirm Conversion events defined AND verified firing: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Uptime monitoring with alerts** Blocker
Manually confirm Uptime monitoring with alerts: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **A/B testing only at ~1k+ conversions/mo** Nice to have
Manually confirm A/B testing only at ~1k+ conversions/mo: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Form-notification emails land in monitored inbox; tested per deploy** Blocker
Manually confirm Form-notification emails land in monitored inbox; tested per deploy: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **One-click unsubscribe headers on bulk email** Standard
Manually confirm One-click unsubscribe headers on bulk email: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Transactional rendering tested in major clients** Nice to have
Manually confirm Transactional rendering tested in major clients: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Git auto-deploy; tested instant rollback** Blocker
Manually confirm Git auto-deploy; tested instant rollback: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Env vars per environment, never committed** Blocker
Manually confirm Env vars per environment, never committed: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Automated backups of non-git state; restore tested** Blocker
Manually confirm Automated backups of non-git state; restore tested: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Preview deployments; resurrect-able from repo** Standard
Manually confirm Preview deployments; resurrect-able from repo: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Pinned dev port in registry** Standard
Manually confirm Pinned dev port in registry: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Every form end-to-end (arrives, confirms, email fires, errors behave)** Blocker
Manually confirm Every form end-to-end (arrives, confirms, email fires, errors behave): verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Written post-deploy smoke checklist** Blocker
Manually confirm Written post-deploy smoke checklist: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.

- ☐ **Visual regression (Playwright screenshots)** Nice to have
Manually confirm Visual regression (Playwright screenshots): verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **README: run/deploy/env/owner** Blocker
Manually confirm README: run/deploy/env/owner: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **One-page ops note with named owners** Blocker
Manually confirm One-page ops note with named owners: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Defined copy-change path (CMS or SLA)** Blocker
Manually confirm Defined copy-change path (CMS or SLA): verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Shared design tokens across portfolio** Standard
Manually confirm Shared design tokens across portfolio: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Copy not hardcoded mid-JSX** Standard
Manually confirm Copy not hardcoded mid-JSX: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Monthly cadence: deps, link crawl, form smoke, CWV, uptime review** Blocker
Manually confirm Monthly cadence: deps, link crawl, form smoke, CWV, uptime review: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Quarterly: content audit, analytics review, ask-the-AIs, consent re-check** Blocker
Manually confirm Quarterly: content audit, analytics review, ask-the-AIs, consent re-check: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Annual: legal pages, full content audit, checklist re-validation** Blocker
Manually confirm Annual: legal pages, full content audit, checklist re-validation: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Deploy changelog habit** Standard
Manually confirm Deploy changelog habit: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Written sunset policy** Nice to have
Manually confirm Written sunset policy: verify this directly with the site owner, account owner, operational records, legal records, real device, or live transaction because the scan cannot prove it.
- ☐ **Redirects from all old URLs after relaunch** Blocker
Manually confirm Redirects from all old URLs after relaunch: review the measured evidence and decide any judgment, account access, legal, process, real device, or real transaction parts that the scan cannot prove.

We tried and couldn't measure these

Dynamic OG images on content pages: we could not reach the page
 Dark-mode-aware SVG favicon: our own reader hit an error
 Breadcrumbs on 3+ level sites: we could not reach the page
 Noindex on thin/utility pages: we could not reach the page
 Pagination self-canonical (not to page 1): we could not reach the page
 FAQPage where real; Product/Course/Event where applicable: we could not reach the page
 Real author bylines + About + Contact with real address (E-E-A-T): we could not reach the page
 Every new page at least 2-3 internal inlinks, descriptive anchors; one page per intent: we could not reach the page
 Visible dateModified + genuine refresh: we could not reach the page
 Hero/LCP image never lazy; fetchpriority/preload: the outside data source was down
 Bfcache-eligible pages: the outside source has no data for this site yet
 Judge on field data: CrUX p75 28-day, mobile first: the outside source has no data for this site yet

Stale DNS removed (dangling CNAME): the outside data source was down

Want every gate green? We ship all 16 on every site we build. Starting at \$1,499. Reply to the report email or visit pikassostudio.com/get-quote.
